PROFESSIONAL SUMMARY

UX/UI Designer with 2 years turning ambiguous, data-heavy problems into products people actually use. I run exploratory and evaluative research myself — interviews, surveys, usability testing — then translate findings into personas, user journeys, and opportunity areas that shape what gets built. As the sole designer across three platforms, I've owned every stage from user flows and wireframes to interactive prototypes and final UI, weighing business goals against technical constraints the whole way through.

EXPERIENCE

UX and UI Designer — Chadura Tech | Bengaluru, Karnataka

Sep 2024 – Present

- Cut user confusion by 30% on a multi-step flow, using usability testing and interviews to find drop-off points, then mapping a cleaner user journey.
- Took 3 client platforms from rough concept to shipped product — personas, wireframes, interactive prototypes, final UI — as the only designer on each, end to end.
- Built and maintain the design system behind 20+ screens, keeping UX standards consistent as new features ship.
- Work weekly with product managers and engineers, weighing business goals against technical constraints before build.

PROJECTS

Genix.ai — DNA & HealthTech Platform

Apr 2025 – Present

- Made genetic lab data 40% easier to understand by running usability testing and rebuilding the information hierarchy around real user comprehension.
- Raised insight clarity 30% by building personas and mapping opportunity areas that directly shaped an AI-driven recommendation feature.
- Design wireframes and interactive prototypes in Figma for every release, validating each one with stakeholders before it reaches engineering.
- Own a consistent, user-centered design across 50+ mobile and web screens for one platform.

Moolago — FinTech & Personal Finance Mobile App

Mar 2025 – Aug 2025

- Raised user clarity 30% on budgeting flows by interviewing users about real spending habits and redesigning around pain points most teams overlook.
- Cut the time users needed to interpret their own financial data by 25%, restructuring insight modules around where people actually got stuck.
- Increased how often users checked their spending by designing AI-supported behavioral nudges into the core flow.
- Validated every design through usability testing in Maze before developer handoff, catching issues early.

Billcostro — FinTech & SaaS

Dec 2024 – Mar 2025

- Reduced workflow abandonment on high-volume tasks by tracing the root cause to navigation and redesigning it from the ground up.
- Cut dashboard interpretation time by 20%, rebuilding the layout around the metrics users actually check first.
- Enabled 5+ teams to build consistently without direct oversight by documenting a reusable design system and UX standards.
- Delivered wireframes and prototypes for multi-step SaaS journeys that held up under real, high-volume usage.

SKILLS

Core Skills: UX Research, User Interviews, Usability Testing, Personas, Journey Mapping, Opportunity Areas, User Flows, Wireframing, Interactive Prototyping, Design Systems, User-Centered Design, Stakeholder Communication

Tools: Figma, Adobe XD, Illustrator, Miro, FigJam, Maze, AI-assisted design tools

EDUCATION

B.E. ECE (CGPA: 7.99) — Kongunadu College of Engineering and Technology, Trichy

2020 – 2024
